UNIVERSITÀ DEGLI STUDI DI NAPOLI FEDERICO II

**DOTTORATO DI RICERCA / PhD PROGRAM IN  
INFORMATION TECHNOLOGY AND ELECTRICAL ENGINEERING**

## **Activities and Publications Report**

# PhD Student: **Vincenzo Maisto**

---

Student DR number: DR995868

**PhD Cycle: XXXVII**

PhD Cycle Chairman: Prof. Stefano Russo

**PhD program student's start date: 01/01/2022**

**PhD program student's end date: 31/12/2024**

**Supervisor: Alessandro Cilardo**

e-mail: [acilardo@unina.it](mailto:acilardo@unina.it)

**PhD scholarship funding entity: MUR PON and University of Naples Federico II**

## General information

Vincenzo Maisto received in year 2020 the Master Science degree in Computer Engineering from the University of Napoli Federico II. He attended a curriculum in Computer Engineering subject within the PhD program in Information Technology and Electrical Engineering. He received a grant from Università Federico II.

## Study activities

### Attended Courses

| Year            | Course Title                                                   | Type          | Credits | Lecturer                | Organization                     |
|-----------------|----------------------------------------------------------------|---------------|---------|-------------------------|----------------------------------|
| 1 <sup>st</sup> | Virtualization Technologies and their applications             | Ad hoc course | 5       | Luigi De Simone         | ITEE                             |
| 1 <sup>st</sup> | Imprenditorialità accademica                                   | Ad hoc course | 4       | Pierluigi Rippa         | ITEE                             |
| 1 <sup>st</sup> | Big Data Analytics and Architectures                           | Ad hoc course | 5       | Giancarlo Sperli        | ITEE                             |
| 1 <sup>st</sup> | Introduzione ai Circuiti Quantistici                           | MSc course    | 9       | Giovanni Miano          | University of Naples Federico II |
| 1 <sup>st</sup> | Quantum Information                                            | MSc course    | 6       | Angela Sara Cacciapuoti | University of Naples Federico II |
| 2 <sup>nd</sup> | Statistical data analysis for science and engineering research | Ad hoc course | 4       | Roberto Pietrantuono    | University of Naples Federico II |
| 3 <sup>rd</sup> | Strategic Orientation for STEM Research & Writing              | Ad hoc course | 5       | Chie Shin Fraser        | ITEE                             |

### Attended PhD Schools

None

### Attended Seminars

| Year            | Seminar Title                                      | Credits | Lecturer                              | Lecturer affiliation             | Organization                                                                                      |
|-----------------|----------------------------------------------------|---------|---------------------------------------|----------------------------------|---------------------------------------------------------------------------------------------------|

### Research activities

Vincenzo Maisto participated in several research activities concerning computer architectures and energy efficiency. His research effort spanned the diverse landscape of digital computing domains, in search for common approaches for performance and hardware consolidation.

#### *High Performance Computing*

In the domain of HPC, Vincenzo Maisto, in collaboration with the partner company A3cube Inc., addressed the issue of energy efficient acceleration of erasure coding system workloads in Hadoop Distributed File System (HDFS).

He successfully integrated PCIe-attached FPGA acceleration, consolidating HDFS' multi-threaded workloads on a single device per HDFS cluster.

#### *Edge-AI*

In the field of edge-AI, he took interest in consolidating multi-tenant and multi-user workloads on edge-class MPSoC platforms.

He evaluated the multi-threaded scalability of AMD Xilinx Vitis-AI platform, unveiling energy inefficiency and scheduling limitations. Subsequently, he proposed the multi-DPU architecture, leveraging hardware heterogeneity and neural network scheduling with accelerator affinity.

#### *Low Power SoCs*

As a joint effort with his hosting research group at ETH Zurich, Vincenzo enabled micro-architectural virtual memory and operating system support for an open-source vector co-processor, namely PULP's Ara. This effort was crucial to enable hardware consolidation of vector applications through multi-threading.

He benchmarked Ara's multi-threading capabilities, successfully consolidating parallel computation at increased performance and energy efficiency.

#### *Low Carbon Knowledge Distillation*

Vincenzo Maisto also took part in the definition of low carbon training methodologies for low-footprint neural networks. He complemented the knowledge distillation model compression technique with a heuristic approach for energy-driven search space reduction for the compression hyperparameters.

### Tutoring and supplementary teaching activities

Tutoring MSc Theses in topic of High-Performance Computing architectures, high-level design methodologies and virtualization-based hardware consolidation.

## Credits summary

| PhD Year        | Courses | Seminars | Research | Tutoring / Supplementary Teaching |
|-----------------|---------|----------|----------|-----------------------------------|
| 1 <sup>st</sup> | 29      | 6.4      | 29       | 0                                 |
| 2 <sup>nd</sup> | 4       | 3.25     | 49       | 0                                 |
| 3 <sup>rd</sup> | 5       | 0.6      | 53.75    | 0                                 |

## Research periods in institutions abroad and/or in companies

| PhD Year                          | Institution / Company | Hosting tutor | Period                                 | Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

## PhD Thesis

Computing technologies are nowadays ubiquitous and their demand is expanding at an ever-increasing rate. The environmental footprint of such immense growth is a severe environmental issue, with computational services alone expected to account for 20% of the global energy demand by 2030. Therefore, the interest in green computing approaches is rising, from low carbon methodologies, low power and energy efficient architectures, to water consumption awareness for datacenters. The modern digital computing landscape is extremely diverse and heterogeneous, with dissimilar requirements in scale and nature. High-end cloud systems are cluster-based and business-oriented, edge and IoT devices focus on field deployment and battery power, while low power SoC and CPU design is concerned with micro-architectural optimizations and power limits. Nevertheless, different domains share a common and pressing urge for lower energy consumption, either to save on the datacenter energy bill or prolong battery lifetime. On the other hand, the extreme diversity brings substantial challenges to common approaches. Most techniques are domain-specific and non-generalizable, common approaches are challenging to find and deploy, and there seems to be no silver bullet to save energy.

In the quest for energy efficiency across domains, this thesis presents and validates common approaches for energy efficiency and hardware consolidation across the digital computing landscape. We target server-class clusters, edge MPSoC platforms and low power SoC and CPU design. In search of common approaches, we avoid domain-specific methodologies that would not generalize across domains. Conversely, we enable hardware consolidation with advanced hardware/software co-design, scalability, and heterogeneity.

### **Research products**

Research results appear in 1 paper published in international journals, 2 contributions to international conferences, and several others works currently under review in international journals and papers.

## List of scientific publications

### International journal papers
